

**Table 7H**

**PANGAEA**

Uniformitarian geologists believe that a single supercontinent, which they have named Pangaea, existed circa 300-100 million years ago, that it had a remarkably smooth terrain, and that, over the course of the next 40 million years, it broke up into the continents and major islands that exist today, which have mountain ranges like the Alps, the Caucasus, the Himalayas, the Rockies, the Appalachians, etc. Excepting for the postulated dates that uniformitarianism demands, this is

exactly how the Bible describes the earth prior to the Flood and the Division of the Land in Peleg's time. The above sketch is just one of many proposed configurations for Pangaea. The vast ocean surrounding it is called Panthalassa.
